FULL-STACK DATA SCIENTIST

Tech Enthusiast with a focus on building efficient end-to-end solutions, I bring expertise in building full-stack applications, data analysis, and predictive modelling. My **GitHub** portfolio reflects a diverse range of projects, from AI-driven pipelines to responsive web designs. I thrive in dynamic environments where cross-functional collaboration and innovative problem-solving are key to success.

TECH STACK

Machine Learning & Deep Learning:

- Supervised Learning: Linear & Logistics Regression, SVM, Decision-Tree and Ensembles.
- Unsupervised Learning: K-Means, Hierarchical Clustering, and Dimensionality Reduction-PCA.
- Neural Networks: Artificial-NN, Convolutional-NN and Recurrent-NN, Natural Language Processing, and Deep Learning Frameworks (TensorFlow & Keras, PyTorch)

Data Science:

- Data Analysis & Visualization, Statistical Analysis & Modeling, Feature Engineering & Optimization Techniques.

Web Development, AI/MLOps and Programming Languages:

- ReactJS, RemixJS, TailwindCSS, Node.js, ShadCN, PostgreSQL, MongoDB, Prisma, FastAPI, Django, and Vercel
- LangChain, Qdrant, MLflow, Version Control (git), Docker, Jenkins, Gitlab, Prometheus, and AWS.
- Python, Javascript/Typescript, and SQL

Auxiliary Skills:

- Linux OS, Large Language Model integration (via LangChain and Ollama)
 - Collaboration and Adaptability, Problem-solving and Inquisitive
-

WORK EXPERIENCE

NSArrows Innovations - Data Science Intern - Pune, Hinjawadi

2nd July 2024 - 28th September 2024

- Developed a robust API service (via FastAPI) with a user-friendly frontend (HTML and CSS) to efficiently extract, clean, and structure data from large PDF files. The processed data is stored in a NoSQL database (MongoDB), adhering to client specifications.
 - Developed a robust Python pipeline that converts videos to audio, transcribes the audio into text, adapts or translates the text as required, and synthesizes the translated content back into the user's voice, based on an input sample.
 - Created a recommendation system utilizing a vector database (MongoDB/Milvus) to perform semantic search and identify similar content effectively.
-

WORK AND PROJECTS

Machine Learning and Deep Learning:

- **Fraud Detection:** Identifying fraudulent activities within financial transactions using Machine Learning algorithms.
- **House Rent Prediction:** Used Machine Learning algorithms to predict house rent prices in India while conducting data analysis.
- **Customer Discount Offering:** Predicting which customers will likely receive discounts for targeted marketing.
- **American Sign Language Detection:** Developed a model to recognize and interpret American Sign Language gestures for communication accessibility.
- **Django:** Utilized Django to create a web-based (non-responsive) diabetes prediction model.
- **MLOps Sandbox:** MLOps Integration Testing (Docker, Jenkins, CI/CD)

Generative-AI:

- **OCR-Gemini:** Leveraged Tesseract for invoice text extraction and Gemini for data structuring the extracted data into JSON format.
- **QueryForge:** Built a tool that leverages LangChain, Hugging Face models, and Qdrant VectorDB to summarize websites by retrieving semantically similar content based on a given URL. Built using React, RemixJS, TailwindCSS, NextUI, Python and FastAPI.

Web Development:

- **Portfolio Website:** Created a portfolio website using ReactJS, RemixJS, TailwindCSS and ShadCN.
- **WordSmith:** Building a blog platform with RemixJS, TailwindCSS, and Next UI, enabling users to publish their own content or generate AI-assisted blog posts. Integrates Prisma ORM for efficient database querying.
- **GitTalk:** Building a SaaS application that enables users to interact with their codebase (GitHub repositories) through conversational AI to identify and resolve issues. The platform also provides automated meeting summaries with timestamped highlights. Tech stack includes ReactJS, RemixJS, TailwindCSS, ShadCN, LLMs for summarization, Prisma ORM, and semantic search powered by PostgreSQL/Qdrant vector database.
- **Taskly:** Building a time-tracking tool to help users monitor tasks and analyze productivity. The app uses React, RemixJS, TailwindCSS, and ShadCN to deliver an intuitive and responsive interface.

EDUCATION

- **Post-Graduation Program in Data Science and Analytics** - Imarticus Learning (Pune) (2023 - 2024) (**TIER-2**)
- **Bachelor's in Business Administration (Computer Application)** Modern College of Commerce & Computer Studies; Savitribai Phule Pune University Affiliated. (2020 - 2023) CGPA - **8.61**
- **Senior Secondary School** - PDEA's Shri Mhalsakant Vidyalaya & Jr. College. (2018 - 2020) - **55.69%**
- **High School** - S.P.M English Medium School, Nigdi-Pune. (2007 - 2018) - **69.00%**

CERTIFICATIONS AND ACHIEVEMENTS

- **Udemy**: Python for Data Science and Machine Learning Bootcamp
- **Kaggle** - **Beginner** and **Intermediate** Machine Learning
- **HackerRank** - SQL **Basic** and **Intermediate**
- **Udemy**: Python Data Structures and Algorithm
- **Udemy**: Amazon Web Services - Solution Architect.
- Ranked 1st in chess competitions during both the 2nd and 3rd years of my academic journey.

LANGUAGES

- English (Proficient), Hindi and Marathi (Native), German and Japanese (Novice)
-
